Assembly and Testing Procedure

We have developed a standard Assembly and Testing procedure To make sure you receive a quality, trouble free product.

CPU, Fan and Memory Installation

Improper CPU heatsink installation will damage the CPU in very short time because the high CPU temperature. Our well trained technician will assemble those components together to ensure that you get a trouble free product.

Setup all connections

We'll setup all connections using VGA card, CD ROM, Power supply, Keyboard, Mouse, Monitor, etc, to fully test the system.

Motherboard BIOS Update

We'll check every Motherboard BIOS version to make sure the BIOS is the most up-to-date one.

Operating System and Hardware drives setup

We'll load all hardware drives and run Windows XP Pro on the system to make sure everything runs smoothly.

BurnIn Test

Then We'll BurnIn the system for up to 48 hours (The industrial standard is 24 hours) using Passmark's BurnIn Test Software tool (www.passmark.com) which allows all the major sub-system of a computer to be tested simultaneously for reliability and stability.

Pack the system for shipping

Then the system will be carefully packed with all original Motherboard box, Manuals, drivers CDs and retail CPU box.
